

# MLS Digital - Networked Managed Lighting System

# **Remote Detectors for Regulating Ballasts**

MLS Digital offers a flexible, user-responsive, building-wide control solution via a network of communicating detectors. Constant monitoring of occupancy and ambient light levels enables the system to automatically deliver optimum lighting conditions while effecting energy and cost savings.

The detectors covered by this data sheet are designed for use with regulating ballasts (with specific controls for DSI, DALI and 1-10V Analogue types). They are designed for ceiling mounting to provide a group of luminaires with presence detection, daylight regulation/photocell control and full communication functions

Presence detection is by passive infrared, effectively enhanced to improve sensitivity to small movements.

Regulating photocell ensures a minimum maintained light level, taking account of the contribution from adjacent luminaires and daylight.

Off delay: Period following the last observed movement after which the lights switch off.

Detection pattern and approximate range in metres at floor level for 2.5m mounting height (detection pattern is cone shaped).

Incorporates simple scene-setting - up to six scenes can be set or recalled via user remote.

Hand Controller provides local user override.

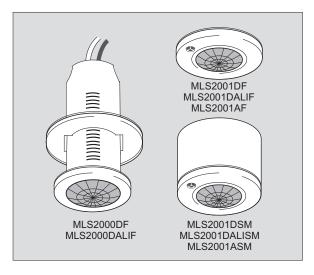

Remote programming via HP2000 ensures changes can be easily accommodated.

OneSwitch Dimming. Manual input to adjust light level or turn luminaires on or off.

100-hour Burn-in. Inhibits dimming functions to allow new lamps to burn in. Available on MLS2001D/DALI only.

#### **Commissioning the Programmable Parameters**

Operation of the system is determined by its commissioning. This is carried out using a menu-driven infrared remote programmer (HP2000) with virtually no disturbance to the building's occupants. Settings can be changed whenever required in the same way. The programmable parameters are shown overleaf in the order they are presented on the programmer. Options are selected from alternatives.

## **Commissioning of Lighting Scenes**

Lighting scenes are set up using the infrared HC5 Hand-held Controller. The scene is set manually then stored by a long press on the selected scene button. New scenes can be set in this way without the need for separate programming devices.

## **Ancillary Items**

### **HP2000 MLS Digital Programmer**

Menu-driven LCD Programmer with automatic equipment recognition and parameter download facilities.

HC5 Universal Hand-held Controller

### **RB2000 Bus Power Supply**

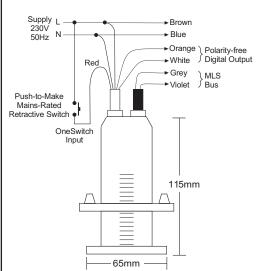

A single Bus Power Supply synchronises and powers the bus for up to 200 MLS Controllers.

It also provides a test facility. Units may be linked for larger installations and to provide a building-wide common zone.

(RB2000LT Bus Power Supply Lite may also be used.)

Please check www.ex-or.com to ensure this is the most recent issue - Ref: D4029l

# Electrical Connections and Installation Notes

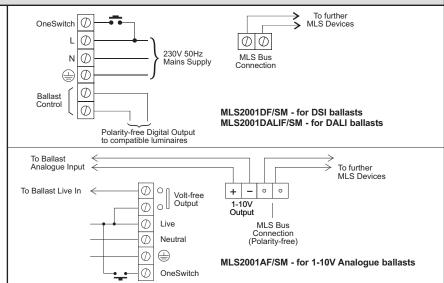

MLS2000DF - for DSI ballasts MLS2000DALIF - for DALI ballasts

#### Installation

100-hr Burn-in\*\*

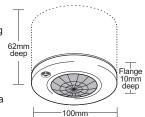

Slimline flush versions: Cut a 50mm diameter (64mm if using an FR64 flush ring or PB64 plasterboard fixing kit) circular hole in the ceiling tile, feed the flying lead and detector through and secure into position with the locking ring. Do not mount within 25cm of a luminaire.

#### Installation

**Flush versions:** Depth required behind ceiling: 62mm from front flange. Sinking box fits into 89mm diameter hole in ceiling tile or plasterboard ceiling. No access above the ceiling is necessary. The detector fits into the sinking box with a simple bayonet action thus concealing the fixing screws.

**Surface versions:** The housing may be secured to a hard surface or a BESA box. The detector fits into the housing with a simple bayonet action thus concealing the fixing screws. Note: Do not mount within 25cm of a luminaire.

Programmable Parameters	Selectable Options (Factory pre-set shown in bold)
Power up	On / Off
Response	Auto / Manual/Bus / Manual Only
Off Delay	1 min to 96 hrs / 10-second Walk-test Mode / Disabled. 20 mins
24 Hour Cycle	On / <b>Off</b> Output turns off for duration of Off Delay if area is unoccupied for 24 hrs. Useful for hygiene flush when controlling water.
On Sensitivity**	0-100 Sensitivity to movement when area occupied. 100 (= max)
Bus Connect	Yes / No
Zone 1, 2, 3 & 4	1-100 addresses. None
Corridor 1 & 2	Set addresses to begin and end contiguous group of zones. None
Global 1 & 2 Rx	Yes / No
Manual I/P	<b>Local</b> / Share This determines whether OneSwitch operates locally (just one detector) or on all devices on the same zones.
Start Lamps	Max / Min
Entry Scene	Select Scenes 1 - 6. Scene 1
Bright-out	Yes/ No
Dimming This parameter refers to digital detectors only: see 'Photocell' below for analogue detectors.	Reg 100-50% Reg 100% Sets the regulating range of the ballast in daylight conditions, i.e. at 100% the ballast can regulate over its full range, at 70% the ballast will not dim below 30% output. Manual override is not affected.
Fade to Off	Yes/ No
When Vacant	Switch Off after Off Delay
	Go to Minimum and do not switch off
	Regulate up to 25%  for 3 x Off Delay (XTN) then switch off
	Go to Scene 6 J until building is vacated then switch off
Photocell <sup>†</sup>	Reg 100 - 50% / Passive / Active / Disabled Reg 100% See 'Dimming' above for details of regulating range.
	Active Holds/switches lights off in bright ambient conditions  Passive Holds lights off in bright ambient conditions  Holds lights off in bright ambient conditions  If either of these options is chosen, the Bright-out and ambient light dimming functions are de-activated. The photocell will not dim the luminaire.
	Disabled No photocell action
Lamp Max	10-100% (10- 50% in 5% increments; 50%+ in 10% increments) 100% Limits the maximum output of the ballast in all operating modes.
Lower Threshold <sup>†</sup>	0-254 Point at which photocell allows lights to switch on.
Upper Threshold <sup>†</sup>	0-254 Point where photocell turns lights off if Photocell Mode = Active
Set-point Low**	0-1023 Aiming point as photocell adjusts ballast output. 1023
Set-point High**	0-1023 Level above which photocell switches its output off (only if
	Bright Out = Yes) 1023

Inhibits dimming functions during burning-in of new lamps.

## **Technical Data**

#### All types:

MAX RECOMMENDED MOUNTING HEIGHT: 3.0m RANGE: Cone-shaped detection pattern, diameter (at

floor level) = 2.4 x mounting height

OPERATING VOLTAGE: 230V 50Hz (UK & Europe)

PRODUCT RATING & RECOMMENDED CIRCUIT PROTECTION: 10 Amps

COLOUR: White

MATERIAL: Flame retardant PC/ABS

PHOTOCELL: Regulating (operational in Scene 1 only)

OPERATING TEMPERATURE: 0°C to 40°C

## MLS2000DF / MLS2000DALIF:

WEIGHT: 70g excluding cable
OUTPUT: Digital DSI/DALI
CAPACITY: 9 ballasts

IP RATING: 4X

# MLS2001D\* / MLS2001DALI\* / MLS2001A\*:

WEIGHT: Approx 200g

OUTPUT: Digital DSI (MLS2001D\*)

DALI (MLS2001DALI\*)

1-10V Analogue (MLS2001A\*)

CAPACITY: 25 ballasts

IP RATING: 4X (MLS2001D\*/MLS2001DALI\*)

3X (MLS2001A\*)

\* Denotes suffix F or SM

Ex-Or operates a genuine policy of continuous improvement. You may expect the specification to be regularly enhanced. For latest technical information, please visit www.ex-or.com
